## SIZEGUIDE

Measure your child's foot and find the correct size

Children's feet grow quickly and jerkily. It's important that you regularly measure your child's feet. Below you can see how much children's feet grow on average in relation to their age:

- Children 0-1 years old approx. 2 cm per year
- Children 2-6 years old approx. 1,5 cm per year
- Children 6-11 years old approx. 1 cm per year

We recommend that new shoes are 1-1.5 longer than the child's foot – as long as the child grows. The shoe must be at least 0.5 cm longer than the foot, so there is room for the foot to slide forward in the shoe when the child moves.

Recommended grow supplement depends on the child's age:

- 0-6 month old 0.5-1 cm
- 6-12 months old 1 cm
- 1-2 years old 1-1.3 cm
- 2-11 years old 1-1.5 cm

However for rubber boots, thermo boots and slippers we recommend a maximum of 1 cm grow supplement.

### How to measure your child's foot

#### PRINT

Remember to print without the use of scale. Print A4.

#### MEASURE

Cut or fold the paper at the dotted line. Place the paper against a wall and place the heel of the foot against the wall on top of the paper. Measure both feet and go for the biggest size.

#### READ

Read the size of the foot and find the right size on the next page. Always remember to add for growth and movement.

## SIZE GUIDE

The size guide can help you to find the right size to your child. Children's feet grow quickly and preferably in jerks, so it is important that you regularly measure your child's feet. A growth allowance of 1.5 cm is recommended when buying new shoes and sandals, max. 1 cm when buying rubber boots, thermo boots and slippers.
